

3DV 2027 Submission — Compliance Status vs. Guidelines + FAQ

Path A paper: “When to Remove and When to Reweight”

August 27, 2026

Compliance table

Requirement	Status
✓ ≤ 8 content pages (refs extra)	Content ends p. 8, p. 9 refs-only — but zero slack ; any addition must be offset.
✓ Abstract ≤ 4000 chars	~ 2060 .
✓ PDF ≤ 50 MB	260 KB.
✓ Double-blind (no names / links / acks)	Clean scan.
✓ Citation accuracy (LLM policy)	Fixed this pass — all 9 entries repo-verified (RESfM: Khatib, Kasten, Moran, Galun, Basri, ICLR 2025; ESfM full author list; GASfM corrected to CVPR 2024 with real title; full dataset paper titles).
✓ Code statement, no links (FAQ)	Added: “Code, configurations, and the rebuilt OOD tracks will be made publicly available upon publication.”
✓ No prompt injection	—
✓ Supp-material rules	Nothing violating (no post-deadline results promised in supp).
✗ Official 3DV 2027 Author Kit template	The one open blocker — currently compiled with the public CVPR sty; the kit must come from the 3DV site / Overleaf (login-gated, so this is an author step).

Author checklist before Aug 28, 23:59 AoE

1. **OpenReview**: create/update profiles for *all* authors (Weizmann email $\rightarrow$ instant activation; DBLP import; do not remove old emails/positions), declare conflicts, and nominate the author-reviewer the form requires.
2. **Author Kit**: download from the 3DV 2027 site or open the Overleaf template, drop the body of the paper `.tex` into it (the preamble comment marks exactly what to swap), keep `[review]` mode.
3. Create the submission $\rightarrow$ get the **paper ID** $\rightarrow$ replace `\paperID{*****}` $\rightarrow$ recompile $\rightarrow$ upload.
4. Optional by **Sep 2**: supplementary zip (anonymized code + the median tables / extra ablations that did not fit).

Page-count note. An earlier report of “7 pages” came from a stale build log; the true current count is **9 pages total / 8 content pages**, exactly at the limit.
